

DYNAMIC JET SEQUENCER

DJS-1

Your Dynamic Jet Sequencer controls 4 jet sets in your spa's "hot seat". This **Quick Reference Card** provides a quick overview of your jet sequencer's main functions and the operations accessible with your DJS-1 keypad.

To start your sequencer:

Press **on/off** key to turn sequencer on. The system will then perform an indicator light test and open all valves. Pressing a second time will turn sequencer off. A built-in timer automatically turns sequencer off after 2 hours, unless manually deactivated first.

Note: If the DJS-1 is installed in a spa using a Gecko Electronics' spa pack or is equipped with an optional pressure switch, the DJS-1 will go on by itself whenever the pump is turned on.

To select and preview a sequence:

Press **sequences** key to select one of the 7 preprogrammed massage sequences. Note that only the first 6 sequences have corresponding indicator lights. The 7th sequence, where all valves are opened at the same time, does not have an indicator light. A preview of the massage is displayed for 5 seconds after selecting a sequence.

To change sequence speed:

Press **speed** key to change the time interval between each step of the selected massage sequence:

Speed 1: 15 seconds between each step.

Speed 2: 10 seconds between each step.

Speed 3: 5 seconds between each step.

The corresponding indicator light flashes to reflect the selected speed.

To pause a massage sequence:

Press **pause** key to interrupt a massage sequence and prolong the action of a jet set (or a combination of sets). Pressing a second time will resume the massage sequence. The "Pause" indicator light will be on in Pause mode.

Pause mode indicator light

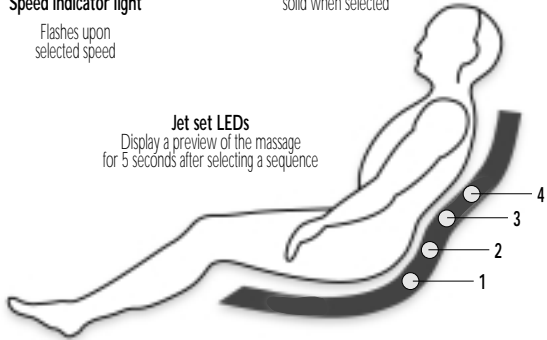

Speed indicator light

Flashes upon selected speed

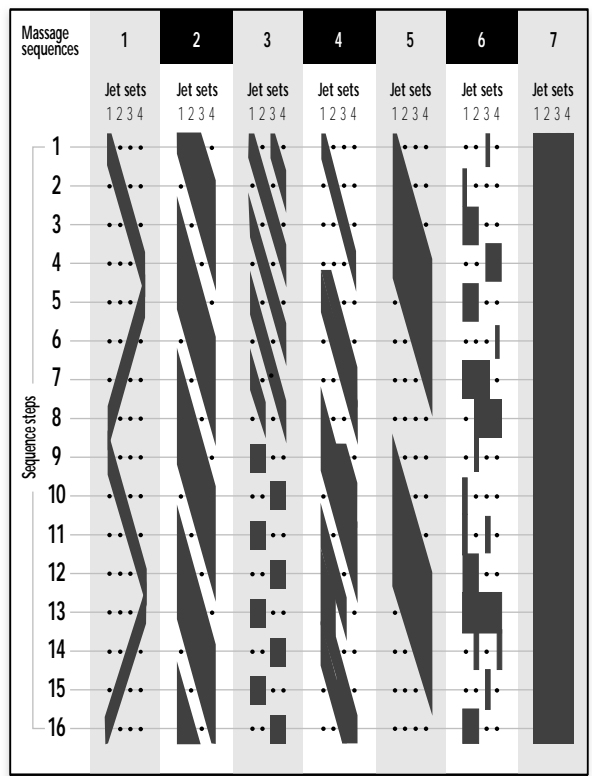

Massage sequence indicator lights

Flash in Preview mode, solid when selected

Jet set LEDs
Display a preview of the massage for 5 seconds after selecting a sequence
